NOTE: This is a 'working draft' sequence. It currently
consists of 9 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will 2040: contig of 2040 b 2140: gap of unknown 1 4170: contig of 2030 b 4270: gap of unknown 1 bp in length length length length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 5 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Worley, K.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 12 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAX97813-x97906 represent extended cDNA's which encode novel human secreted proteins (see AAY36129-Y36222) and which have cytostatic, thrombotic and osteopathic activity. The extended cDNAs can be used to express secreted proteins or parts of them or to obtain antibodies capable of binding to the secreted proteins. They may also be used in diagnostic, forensic, gene therapy and chromosome mapping procedures. Uses also include design of expression vectors and secretion vectors.

                                                                                                                                                                                                                                Ct tissue sources. The sESTs can have a range of activities depending on the tissues they were isolated from. The activities depending on the tissues they were isolated from. The activities include: Cc chemotactic; proliferative; immunomodulatory; haematopoletic; cc chemokinetic; analgesic; haemostatic; thrombolytic; antidabetic; cc chemokinetic; antibacterial; antifungal; antiviral; antidabetic; cc chemokinetic; uninerary; antiulcer; osteopathic; neuroprotective; cc antiantmatic; uninerary; antiulcer; osteopathic; neuroprotective; cc nootropic; antiparkinsonian; antipsoriatic; cerebroprotective; cc terropy and in vaccines. The sests can be used for gene cc therapy and in vaccines. The sests are useful as probes for the cc identification and isolation of full-length cDNAs and genomic DNA cc molecules which correspond to the sests. Proteins encoded by the sests can be useful in assays for determining biological activity and raising cc antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions costeoporosis, osteopathritis, central nervous system disorders (condition of the sentral nervous system disorders (condition softener's, Parkinson's, Huntington's disease, stroke), coagulation cd disorders (haemophilla, thrombosis), inflammatory disorders (Crohn's cdisorders (Azabeimer's, bacterial, fungal or viral infections, depression and cc psoriasis. AAA45926 to AAA45931 represent linker variants which are given cc in the exemplification of the breasent invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expressed

                                                                                                                                Alignment
                                                                                                                                                                                                       The present invention relates to the isolation of novel cDNA sequences CC which encode human secreted proteins. The cDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynucleotide sequences. The proteins are useful for identifying compounds that modulate their activity and production. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis), infectious disorders (e.g. hepatitis), allergic conditions (e.g. asthma), neurodegenerative disorders (e.g. allergic conditions (e.g. asthma), neurodegenerative disorders (e.g. Alzheimer's disease), liver fibrosis, coagulation disorders (e.g. theodyllia), and tumours. The polynucleotide sequences of the invention are also useful in gene therapy. ABK35610-ABK36232 represent to company the polynucleotide for novel human accorder of the invention that encode for novel human and the column sequences of the invention that encode for novel human are also useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Jacobs K,

The extended cDNAs can be used to express secreted proteins or parts of them or to obtain antibodies capable of binding to the secreted proteins. They may also be used in diagnostic, forensic, gene therapy and chromosome mapping procedures.

The polypeptides are also useful for identifying their binding partners. The present sequence represents a gene encoding a human secreted protein (see descriptor line for gene number and clone identification).
                                           Human cDNA sequence encoding for PRO4426 polypeptide.

CC PRO polypeptides. The PRO polypeptides are useful to detect other CPRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. CC come of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC cortilage, the proliferentiation of chondrocytes, the proliferation or cortilage, the proliferation or alpha equipment of the release of proteoglycans from cartilage, the proliferation of inner ear urricular supporting cells or cof T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by completed in binding interactions. The polynucleotides encoding

An antigen presenting cell that expresses the sequences is useful for treating ovarian cancer by incubating CD4+ and/or CD8+ T cells isolated from a patient. The T cells can then be proliferated and administered to the patient to inhibit the development of cancer. The DNA sequences are useful as probes or primers for nucleic acid hybridisation, to direct expression of a polypeptide in appropriate host cells. Detecting the presence of a cancer in a patient involves obtaining a biological sample from the patient, contacting the mount of protein that binds to the agent that binds to the protein, detecting the protein to a predetermined cut-off value and determining the presence of cancer. Sequences ABK09464-ABK09802 represent PCR primers and cDNA molecules encoding ovarian tumour proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide encoding polypeptide comprising overland tumour protein, useful for detection, diagnosis and human overlan cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24-MAY-2000; 2000US-207107P.

                 The invention relates to nucleic acid sequences (AAX22111 to AAX22134) encoding human secreted proteins (AAV01135 to AAV01158). The secreted protein gene sequences are deposited with the ATCC under deposit number ATCC 209118. Host cells comprising recombinant vectors containing the nucleic acid sequences are used for the recombinant production of the secreted proteins. The polynucleotide and amino acid sequences are useful for are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Pathological conditions can be also diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; secreted protein; gene therapy; protein therapy; tissue; cance; tumour; neurodegenerative disorder; leukaemia; autoimmune disease; AII developmental abnormality; foetal deficiency; Alzheimer's disease; cognitive disorder; schizophrenia; immunological disorder; mood disorder; immune deficiency disease; respiratory disorder; arthritis; skeletal; haematopoietic disorder; neural; osteoporosis; metabolic disorders; cardiovascular; endocrine; gastrointestinal; asthma; diagnosis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, immune deficiency diseases or blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human secreted

The method comprises incoulating an animal with a vector expressing a fusion protein having an antigen protein fused to the C-terminal side (extracellular) of a transmembrane domain protein (the N-terminal side of which is intracellular), and then isolating and purifying the antibody from the animal. The antibodies can be used as drugs, vaccines, diagnostic reagents and laboratory reagents are present sequence encodes a polypeptide, designated HP10390, which we used in the course of the invention.

The cDNA was isolated from a human stomach cancer cell line cDNA library. The protein has no homology with any known protein. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful therapeutically.

Also composition are: (1) processes for identifying an anti-neoplastic agents comprising contacting a cell exhibiting neoplastic activity with a compound first identified as a cancer related gene modulator, and compound first identified as a cancer related gene modulator, and contecting a decrease in the neoplastic activity. (2) a process for contecting a decrease in the neoplastic activity. (2) a process for contecting a decrease in the neoplastic activity. (2) a process for content in the cancerous state of a cell by determining an increase in the level of expression of at least one gene, where an elevated content is content in the level of expression relative to a known non-cancerous cell indicates a cancerous state or potentially cancerous state. The anti-neoplastic agent is cuseful for treating cancer in an an animal against cancer. CC useful for treating cancer in an animal, where the composition elicits the production of cytotoxic T confinal, where the composition elicits the production of cytotoxic T confinal, where the composition elicits the production of cytotoxic T confinal is a human. The cancer-linked genes and polypeptides are also useful as targets for cancer-linked genes and polypeptides are also cuseful as targets for cancer-linked gene located on chromosome 12, which encodes transmembrane protein 4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                expression compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-0CT-2000

This sequence is mapped to the human chromosome 12q15 region. It is overexpressed in tumours. Antagonists, antibodies and antisense nucleotides to Zsig9 are useful for detecting and treating tumours. The antagonist may be an antibody or receptor to Zsig9 and it may be radio-labelled or fused to a polypeptide toxin. It can be used for down regulating the overexpression of Zsig9. The gene sequence can be used as nucleic acid probes to detect RNA encoding Zsig9. The Zsig9 sequence facilitates improved diagnostic and therapeutic techniques for detecting and treating cancers, especially of the brain, liver, stomach, lymphoma,

This cDNA clone encodes human secretory peptide-9, or Zsig9, wariant (see AAW88474). Zsig9 (see also AAW88469) is overexpr. human brain, liver, lung, oesophageal, stomach, colon, rectal, thyroid and lymphoma tumors. Thus, Zsig can be used as an indicator for cancer. Zsig9 cDNA was discovered in a placenta clone from a full-term pregnancy cDNA library which contained a

The invention provides polynucleotides (see AAX06968-70) encoding Zsig9 polypeptides (see AAX08968-77) including mature polypeptides, other processed forms, variants and mouse orthologues. The Zsig9 gene, or probes derived from it, can be used to determine if Zsig9 is present on chromosome 12, and if a mutation has occurred. Antibodies raised against zsig9 can be used as diagnostic agents to determine the presence of Zsig9 can be used as diagnostic agents to determine the presence of the Xsig9, and thus the presence of cancer. They can also be labelled with radioisotopes or fused with toxins and used to treat tumours which oversyress Zsig9. Antisense nucleotides derived from Zsig9 cDNA can also be used to inhibit the growth of tumour cells. Zsig9 proteins can be used to enhance the growth or development of the

It is overexpressed in tumours. Antagonists, antibodies and antisense nucleotides to Zsig9 are useful for detecting and treating tumours. The antagonist may be an antibody or receptor to Zsig9 and it may be radio-labelled or fused to a polypeptide toxin. It can be used for down regulating the overexpression of Zsig9. The gene sequence can be used as nucleic acid probes to detect RNA encoding Zsig9. The Zsig9 sequence facilitates improved diagnostic and therappettic techniques for detecting and treating cancers, especially of the brain, liver, stomach, lymphoma etc., at an early stage.

                                                                                                                                                                                                                                                                                                                                                             This sequence represents the coding sequence of human cDNA clone HP10390 which encodes a 20 KD protein with one putative transmembrane domain in the N-terminus. The cDNA was isolated from a human stomach cancer cell line cDNA library. The protein has no homology with any known protein. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful therapeutically.

                                                                                                                                                                                                                                                                                                                                          This cDNA clone encodes novel mouse secretory peptide-9, or Zsig9 (see AAW88476), an orthologue of novel human Zsig9 (see AAW88469). Human Zsig9 is overexpressed in a number of tumours including brain, liver, lung, oesophageal, stomach, colon, rectal, thyroid and lymphoma tumors, and thus can be used as an indicator for cancer. The invention provides polynucleotides (see AAW86968-70) encoding Zsig9 polypeptides (see AAW88469-77) including mature polypeptides, other processed forms, variants and the mouse orthologues. The Zsig9 gene, or probes derived from it, can be used to determine if Zsig9 is present on chromosome 10, and if a mutation has occurred. Antibodies raised against Zsig9 can be used as diagnostic agents to determine the presence of Zsig9, and thus the presence of cancer. They can also be labelled with radiolsotopes or fused with toxins and used to treat tumours which overexpress Zsig9. Antisense nucleotides derived from Zsig9
